

**Survey about Smoking**

**Analysis from Gianni Triantis**

**Class 9D**

**Subject: Biology**

## **Contents**

**I. Introduction + Construction of the survey paper**

**II. Answering the W-Questions**

**III. Analysis of Question 1.**

**IV. Analysis of Question 3.**

**V. Analysis of Question 2.**

**VI. Analysis of Question 4.**

**VII. Comparison: Analysis of Question 4 with a survey from 2004,1997 and 1993**

**VIII. Conclusion**

## The topic of the study is: "Smoking in young ages"

Umfrage Biologie

Alter: \_\_\_\_\_ Klasse: \_\_\_\_\_

1. Willst du in der Zukunft rauchen?  
 Ja  nein  vielleicht
2. Rauchen deine Eltern?  
 Ja  Nein
3. Was wär ein Grund für dich, mit dem Rauchen anzufangen?  
 Langeweile  
 Cool sein  
 Stress
4. Hast du schon einmal geraucht?  
 Ja  Nein
5. Wenn ja, wie alt warst du ?  
\_\_\_\_\_

## Survey paper

## **Answering the W-Question**

**1) Which grades participate in the survey?**

**The grades from 8-10 participate in the survey.**

**2) Which group ages participate in the survey?**

**The youngest participant is 13 years old and the oldest participant is 17 years old.**

**3) Who participate in the survey?**

**Boys and girls from Lutherschule**

**4) How many boys and girls participate in the survey?**

**101 boys**

**113 girls**

**5) How many students participate in this survey?**

**$101 + 113 = 214$  students participate in the survey.**

**6) Why did I choose those questions?**

**I chose those questions because I want to know how many students are dealing with the topic smoking.**

**7) Why did I choose those grades?**

**I chose those grades because many students at this age, try new things out like drinking alcohol for the first time or many students try out smoking.**

## Analysis of Question 1.

The first question is:

Do you want to smoke in the future?

Possible Answers: yes-no-maybe

Results:

89 boys do not want to smoke in the future. 101 girls do not want to smoke in the future. 12 boys maybe want to smoke in the future. 12 girls maybe want to smoke in the future. There is no one, who wants to smoke in the future in this survey.

## Analysis of Question 2.

Question: Do your parents smoke?

Possible Answers: yes – no

Results:

87 parents of 214 asked students smoke. 127 parents of 214 asked students do not smoke. 47 boys live in a household where one of the parents smokes. 40 girls live in a household where one of the parents smokes.

Boys – Girls

### **Analysis of Question 3.**

**Only a few students answered that question. That means there are not enough survey papers to analyze. So there are no results for the question number 3.**

## Analysis of Question 4.

Question: Have you ever smoked in your life?

Possible Answers: yes – no

Results:

58 of 214 have smoked in their life. 156 of 214 have not smoked in their life.  
35 boys of 214 have smoked in their life. 23 girls of 214 have smoked in their life.

## **Comparison of my survey with a survey from 2004,1997 and 1993**

**Share of young persons (also like in my survey the age group from 13-17) who have smoked one time in their live**

<b>1993</b>	<b>1997</b>	<b>2004</b>	<b>2013</b>
<b>20 %</b>	<b>28 %</b>	<b>23 %</b>	<b>27 %</b>

**Taken from Politik und Wirtschaft 9, Cornelsen 2008**

### **Conclusion :**

**All in all we can see that the result of the survey is not good because there are some students which have smoked once. A good thing is that no one wants to smoke in the future. We can also say that more students live in a household, where no parents smoke. Only 10 % of 214 asked students maybe want to smoke in the future. But if we compare the result from 2004 with my survey, we can see that the number has increased. Over the years many things have changed in the industry of cigarettes. Cigarette firms are not allowed to make any commercials on TV or cinemas. The European Parliament also decided that there has to be more deterrent on cigarette packs. They decided that there has to be a picture of a smoker lung. I think those things have not worked well because the number has increased.**
